

Proteomedix is a growing start-up company with headquarters in Zurich-Schlieren, Switzerland. It develops, manufactures and sells innovative in-vitro diagnostics products for prostate cancer diagnosis. The first product Proclarix[®] is improving prostate biopsy decision making in men suspected to have prostate cancer and was launched in 2020. The company is looking for a Digital Health Product Manager who is managing and shaping our portfolio of digital health solutions and interacts with top management and internal departments ranging from R&D, operations, QM/regulatory to marketing and sales. Location: Zurich-Schlieren, Switzerland

Digital Health Product Manager

Your Responsibilities

- Gather business requirements from end users and translate them into digital health solutions to create inspiring customer experiences
- Design and develop digital solutions in close collaboration with external partners
- Manage Proteomedix' current prostate cancer clinical decision support system and future digital health solutions along the product lifecycle
- Be the subject matter expert for Digital Health and contribute to Proteomedix' digital health strategy
- Act as the interface between management, medical affairs, manufacturing, quality®ulatory, marketing&sales, research&development and operations.
- Drive digital health product launches together with the marketing team
- Demand forecasting

Profile and Expertise

- University degree in bioinformatics, IT or business
- Professional experience in project or product management - ideally in the IT software industry for medical products
- Strong track record in software customer experience design
- Track record in digital health software project management in the regulated environment
- Experience in successfully working with external technology providers and suppliers
- Excellent communication skills and a demonstrated ability to interact with customers, partners and internal stakeholders at all levels of the organization
- Hands-on experience with medical standards (HL7/FHIR/xDT)
- Fast-learner, passionate about continually adapting your skills and knowledge, agile and IT savvy
- Fluent in German and English
- Experience of IEC 62304 (medical device software), ISO 13485 and handling private patient data is a strong plus
- Experience with artificial intelligence and/or medical imaging analysis (i.e. MRI) is a plus
- Exposure to statistics, bioinformatics, or programming is a plus
- Knowledge of *in-vitro* diagnostics (IVD) is a plus

Your Benefits

- You will be working in an innovative company on the cutting edge of technology with a direct impact on improving patient care.
- You have a high degree of freedom in organizing your work.
- You will participate in product launches in Europe and in the implementation of global market and business development plans.

If you are interested in this role and feel like you can contribute to the success of Proteomedix please send your detailed curriculum vitae to jobs@proteomedix.com.
